

Bi State Region Clean Air Partnership Checklist & Pledge

The Bi-State Region Clean Air Partnership supports and promotes cleaner air by seeking out and implementing cost effective solutions that benefit cleaner air- fuel efficiency, cleaner fuels/vehicles, alternative transportation, trip reduction, environmentally friendly purchasing, alternative energy, and energy efficiency and conservation. Each voluntary commitment reduces ground level ozone and particulate matter regionally and contributes to cleaner air globally.

To become a member of the Bi-State Region Clean Air Partnership, fill out the checklist below and return with your signed pledge to the Bi-State Regional Commission. It is expected that all of the suggestions in the checklist will not be possible by every partner, but any improvements from "business as usual" will help foster a cleaner environment in the Bi-State Region. Try to find at least one activity in each category that is not a current practice to pledge to implement. Recognition of existing best practices will also be important for partners who proactively have taken a "green leadership" role in our region. Members will be featured on the partnership website, which will also offer resources to members for improving air quality. Periodic inventories will check the progress of members and outstanding organizations will be recognized. Remember... "it all adds up to cleaner air"...what you do today and choose to implement tomorrow.

Transportation

Transportation is by far the leading cause of air pollution in the bi-state region. From personal cars to freight, the numerous vehicles operating in the region significantly add to air pollution, especially ground level ozone and particulate matter. By reducing the number of trips, choosing alternative transportation and investing in more fuel efficient vehicles and less-polluting fuels, we can all have a positive impact on air quality.

FLEET MANAGEMENT

Current Practice	Will Implement	
		Choose lower emission vehicles, hybrid electrics or vehicles that use alternative fuels (E85, Biodiesel, Compressed Natural Gas, etc)
		Maintain all fleet vehicles. Tune up your vehicle every 5,000-10,000 miles, adjust brakes and check tire pressure regularly.
		Retrofit diesel engines
		Refuel vehicles in the early morning or in the evening to reduce the chance of ground-level ozone formation. This occurs when the volatile organic compounds (VOCs) in the gasoline react with sunlight.
		Practice "Right Size Vehicle" policy
		Avoid quick starts, excessive idling and maintain a constant speed over the course of a trip
		Implement anti-idling policy
		COMMUTING
Current Practice	Will Implement □	Provide and encourage employees to use Direct Deposit
		Offer telecommuting and teleconferencing
	_	Implement e-commerce/ e-governments by increasing the amount of business accomplished online (online forms, purchasing, etc)
		Offer a compressed work week or a flex-work schedule
		Schedule meetings and deliveries during non-peak hours (10AM- 2:30PM)
		Encourage carpooling by offering preferential parking and guaranteed ride home
		Implement parking pricing
		Offer transit pass subsidies (e.g. Implement commuter tax benefit for mass transit subsidies)
		Encourage biking or walking to work by providing showers and secure bike racks
		Encourage employees to bring a brown bag lunch

Energy and Emissions Reductions

Offer employee education on Smart Driving techniques

With heavy reliance on coal-powered electricity, it is especially important for those of us in the Midwest to associate energy usage with air quality deterioration. Although the pollution from power

plants is not readily visible when you turn on a light or plug in electronics, it is easy to avoid with simple, cost-effective measures. An inventory can help you better understand the impact of these activities on air quality and suggest ways to increase energy efficiency and save money.

ENERGY

Current Practice	Will Implement			
		Conduct energy/lighting audits and implement energy management programs		
		Use LED outdoor lighting. Governments can implement LED traffic lights		
		Incorporate natural lighting into the building environment		
		Turn off lights in empty rooms and replace incandescent bulbs with fluorescent light bulbs		
		Use Energy Star and energy efficient equipment		
		Set thermostat 2° warmer in the summer and 2° cooler in the winter. Use a timer to turn down the heat/air conditioning in the evenings and on weekends.		
		Use low energy mode or shut off electronics when not in use		
		Invest in alternative energy or implement building-level alternative energy (e.g. solar, wind or geothermal)		
EMISSIONS REDUCTIONS				
Current Practice	Will Implement			
		Conduct emissions inventories and set goals to reduce emissions		
		Create an emissions reductions plan		
		Enroll in an offsetting program		

Operations and Maintenance

Although transportation and energy are in the forefront of air pollution issues, there are many day-to-day activities associated with operation and maintenance of an organization that can have an impact on air quality. From reducing waste, to purchasing locally, to conserving resources... "It all adds up to cleaner air".

LESSEN WASTE

Current Practice	Will Implement	
		Reduce office waste by printing double sided or using electronic documents. Use refillable pens and pencils and biodegradable packing materials/kitchen ware.
		Reuse materials. Use reuseable plates, cups and cutlery. Reuse boxes and envelopes.
		Implement a recycling program that incorporates paper, plastic, cardboard, glass and metal
		Recycle electronics, lighting and ink cartridges
		Choose electric, propane or solar powered tools including lawn care equipment. Avoid using gasoline powered mowers and other small spark engines, especially on poor air quality days.
		Reducing mowing times by using native landscaping. This also cuts down on water and fertilizer usage.
		ENVIRONMENTALLY FRIENDLY PURCHASING
Current Practice	Will Implement	
		Purchase cleaning products with non-toxic, natural and biodegradable ingredients.
Practice	Implement	Purchase cleaning products with non-toxic, natural and biodegradable ingredients. Avoid cleaning products with chlorine bleach, phosphates, EDTA & NTA, petroleum-based solvents and other toxic compounds.
Practice	Implement	Avoid cleaning products with chlorine bleach, phosphates, EDTA & NTA,
Practice	Implement	Avoid cleaning products with chlorine bleach, phosphates, EDTA & NTA, petroleum-based solvents and other toxic compounds.
Practice	Implement □ □	Avoid cleaning products with chlorine bleach, phosphates, EDTA & NTA, petroleum-based solvents and other toxic compounds. Dilute concentrated products
Practice □ □ □	Implement □ □ □	Avoid cleaning products with chlorine bleach, phosphates, EDTA & NTA, petroleum-based solvents and other toxic compounds. Dilute concentrated products Purchase non-toxic and water-based office supplies

MAINTENANCE EMISSIONS

Current Practice	Will Implement	
		Use low or no VOCs paints, sealers, solvents and glues
		Store solvents in air tight containers
		Dispose of hazardous materials properly
		Avoid over-filling gasoline equipment or tanks.
		Replace small-spark engine equipment with models made with emission controls (after 2007)- (e.g. lawn-mowers, leaf-blowers, chain-saws,etc.)

Particulate Matter (PM2.5)

Particulate matter smaller than 2.5 microns (or PM2.5) is of particular concern in the Bi-State Region as federal standards have tightened and we inch closer and closer to non-attainment. High levels of PM2.5 are not only bad for the environment and human health, but can also have economic impacts. A non-attainment designation may mean more regulations, fewer road projects and loss of economic development opportunities to areas in attainment. The largest source of PM2.5 in the region is from vehicles. Again, by reducing the number of trips, choosing alternative transportation and investing in more fuel efficient vehicles and less-polluting fuels, we can increase the physical and economic health of our communities.

REDUCING PM2.5 EMISSIONS

Current	Will	
Practice	Implement	
		Use and advocate alternative transportation. Any decrease in the number of vehicles, decreases particulate matter emissions.
		Retrofit wood burning and soot producing stoves and heaters
		Reduce energy usage.

Pledge	
I, the undersigned representative, pledge my organization to contribute to cleaner air in the Bi-State region.
